

Task 2.5

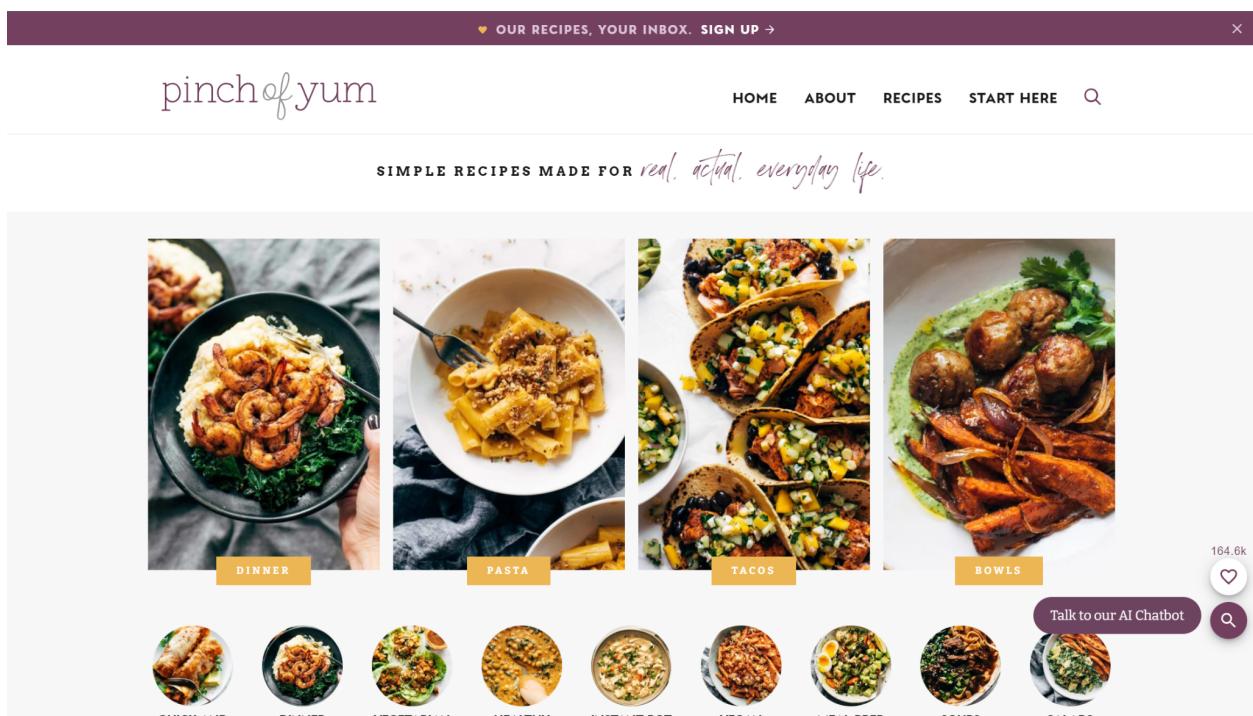

Model Adjustments: Added pic attributes and description attributes, both were not listed in my original table.

Added a search bar on the list page but have not yet implemented its logic.

Added a login on the homepage, yet to implement its logic as well.

Inspiration from existing recipe apps:

Pinch of Yum: I liked the layout of this website and where they chose to put things. Such as the email sign up right at the top. I noticed that 99% of the recipe websites I checked have the 3-4 images on the homepage with rectangular images next to each other of specific recipes and I like that to what this website did differently is on the bottom of that there are circular images of even more categories.

Ambitious Kitchen: On this website as you can see they have the same image layout just without the circular images. I like that the home page has seasonal recipes. And right on the top is a link to a possible blog post of even more recipes. I also like the clean and simple color palette on this website.

hello. fall

Cafe Delights: On this website, also a very similar layout but very simple. I really like the image layout here with the text in the middle and the transparent rectangle behind IT, I also like the font choice on that.
